THE CHOICE

The *SECOND* Advantage

01

Market Opportunity

The global smart gun market is projected to grow from \$330.7 million in 2024 to \$467.6 million by 2030, with the U.S. market alone valued at \$87.8 million. At the forefront of this opportunity, Second Trigger delivers unmatched adaptability and security for legacy firearms through a 4+1 patent-backed modular solution. Unlike Identilock, which sold approximately 500 units per month with basic biometric locks, Second Trigger seamlessly upgrades existing firearms without replacement, enhancing them with data-driven safety features.

Our accessory is engineered with proximity sensing, directional recognition, and theft recovery tracking, providing users with real-time alerts and usage logs through wearable devices and mobile apps. This positions Second Trigger as a leader in data-driven technology.

Looking ahead, Second Trigger is poised to support law enforcement training by monitoring usage patterns, decision-making moments, and situational awareness—revolutionizing training programs and strategic deployment. Beyond traditional markets, our technology is also primed for adaptation within the airsoft community, enhancing safety,

performance tracking, and competitive reliability.

In addition to our 4 Second Trigger patents the 5th patent expanding from our retrofits into fully integrated weapons platforms. This IP allows integration across handguns, rifles and advanced platforms.

With a pre-funding IP valuation of \$25 million (including our fifth patent) and projected annual revenues of \$20-28 million, Second Trigger is positioned for substantial growth, even without law enforcement contracts. Our presence at Collision 2024, alongside 3 generations of prototypes, showcases our innovation and market readiness.

Additionally, Second Trigger's offline-compatible app (Beta Version) is designed for privacy-conscious owners, offering full anonymity and data control. This version operates with proximity, directional recognition, and multi-user functionality, ensuring complete security while sacrificing online alerts for true discretion.
